MADE IN USA

Chromastrand Labs is proud to be based in Loveland, Colorado. We are dedicated to producing high-performance 3D printing filament for real applications. We leverage three generations of plastics production experience into selecting optimal polymer blends for 3D printing processes and parts.

## THE RIGHT 3D PRINTING FILAMENT FOR YOUR NEEDS.

DIAMETER – LulzBot, Ultimaker, Airwolf, and a few others use "3mm" filament (which is technically 2.85mm). Most other printers use 1.75mm filament.

WEIGHT – Be sure not to run out. Your slicing program will tell you how many grams of material a print should require.

MATERIAL – *Premium ABS* has a great combination of strength, heat resistance, and lower fumes and warping than lower grades of ABS. *INOVA-2008 PETG* features low warping, splitting, superior bed adhesion, and low fumes and emissions.

WHY CHOOSE CHROMA STRAND LABS FILAMENTS?

- Tight quality control for consistent printing color to color and batch to batch
- State-of-the-art plastics extrusion technology
- Consistent dimensions
- Vibrant Colors
- Fast Shipping
