2026 INTERPHEX Efficiency Champion Award
INTERPHEX Global 2026 — New York, NY

Eldon James Honored with 2026 INTERPHEX Efficiency Champion Award for BioKlik™ Assembly Innovation

Single-use multi-connect assemblies powered by patented SeriesLock® technology, engineered to deliver integrated efficiencies across pharmaceutical and bioprocess manufacturing.

APRIL 21, 2026 | NEW YORK, NY – Eldon James, a leading innovator in high-purity fluid management solutions, is proud to announce that it has been named the **2026 INTERPHEX Efficiency Champion at INTERPHEX Global 2026**, one of the pharmaceutical and biopharmaceutical manufacturing industry’s most distinguished annual honors. The award was presented by INTERPHEX in recognition of Eldon James’s **BioKlik™** Assembly platform — a suite of ready-to-use, single-use fluid management assemblies that is transforming how biopharma facilities connect, configure, and scale their processes.

The **INTERPHEX Exhibitor Awards** were established to recognize leading vendors for their knowledge, innovation, and state-of-the-art technologies each year at INTERPHEX. The program invites exhibitors to submit new technologies and products, showcase their impact, and earn recognition across the global pharmaceutical and biopharmaceutical industry.

The **Efficiency Champion Award** is granted to an exhibitor who demonstrates a superior understanding of the need for integrated process efficiencies. As the pharmaceutical and bioprocess industries continue to accelerate at a rapid pace— Eldon James delivers precision-engineered technology that streamlines operations and enhances throughput across every stage of production.

“We didn’t build BioKlik™ to meet the industry standard — we built it to change it. The INTERPHEX Efficiency Champion Award affirms that biopharma manufacturers are ready for connection technology that performs without limits.” Marcia Coulson, President of Eldon James.

BioKlik assemblies transform what was once a complex, time-intensive build into a shelf-to-system process that takes minutes. Leveraging patented “connection innovation” technology, BioKlik components feature ultra-low profile, ergonomic, leak-free quick-connect couplings that can be assembled or reconfigured rapidly without compromising sterility.

From lab bench to commercial scale, BioKlik adapts. Its modular architecture lets facilities configure tube runs, manifolds, and sampling ports to the precise demands of any process — enabling faster scale-up, seamless equipment swaps, and streamlined upgrades with minimal disruption at every stage of production.

BioKlik™ and its SeriesLock® family turn every connection point into a strategic asset: a reliable, reusable, and rapid link solution that safeguards product integrity, trims operational expense, and contributes to a greener, more resilient biomanufacturing ecosystem. For companies that view every component as a lever for competitive advantage, BioKlik is the building block that turns ambition into reality.

WE ARE CHANGING THE WAY YOU CONNECT®

About Eldon James Corporation

Eldon James is a woman owned, leading manufacturer of specialized fluid management components, providing innovative, high-quality, and reliable plastic fittings and tubing for the medical, biopharmaceutical, and laboratory industries. Committed to excellence and technical advancement, Eldon James supports global manufacturing with solutions that prioritize safety, sterility, and performance.
